

Submitting a Student Project to the Department GitHub Repo

A six-step walkthrough for getting a project from a local folder into `lordsinstitute/csm-department` as a pull request — the same process used for every submission.

01

STUDENT

Fork the LIET repository

On GitHub, open the department repository and click **Fork**. This creates a personal copy under your own account — you'll work there, never directly on the original.

Done in the browser, no command needed.

02

STUDENT

Create your branch: Name + Roll No.

Every submission lives on its own branch, named after you, so your work never collides with anyone else's.

TERMINAL

```
git checkout -b FirstnameLastname_RollNo
git push origin FirstnameLastname_RollNo
```

Can also be created from the branch dropdown on GitHub.

03

STUDENT

Clone your branch locally

Pull that branch down to your machine so you can add files to it.

TERMINAL

```
git config --global core.longpaths true
git clone --branch FirstnameLastname_RollNo --single-branch https://github.com/<your-username>/csm-
```

`core.longpaths true` prevents Windows path-length errors — this repo has some deeply nested files.

04

STUDENT

Put your project in the correct folder

Check `CONTRIBUTING.md` for your batch's folder name, then create a subfolder named `<RollNo>-<ProjectName>` and copy your project into it.

projects/batch-2024-2028/160924748015-EngineerAI - AI Field Service Copilot/

Leave everything outside this folder untouched. Exclude:

.env

node_modules

venv

__pycache__

build/

.git

.idea

.gradle

05

STUDENT

Commit and push

Stage only your project folder, double-check what's included, then commit and push it to your branch.

TERMINAL

```
git add "projects/batch-2024-2028/<RollNo>-<ProjectName>/"
git status --short
git commit -m "Added: <Project Name>"
git push origin FirstnameLastname_RollNo
```

git status --short should list only your project's files — nothing else.

06

STUDENT

Create the Pull Request

On GitHub, click **Compare & pull request**: base is lordsinstitute/csm-department, compare is your fork's branch.

Title: <Project Name> | <Roll Number>

Description: Project Name, Roll Number, Team Members.

Submit it — do not merge it yourself.

Who does what

STUDENT

- Forks the repository
- Creates their named branch
- Clones it locally
- Adds their project to the right folder
- Commits and pushes
- Opens the pull request

ORGANISATION

- Reviews the pull request
- Requests changes if something's off
- Merges it into main
